Stress echocardiography. A stress test may be accompanied by echocardiography. The echocardiography is performed both before and after the exercise so that structural differences can be compared. A resting echocardiogram is obtained prior to stress. The images obtained are similar to the ones obtained during a full surface echocardiogram, commonly referred to as transthoracic echocardiogram ...

The normal "pump" twin faces the excess burden of having to send and receive blood to the acardiac mass as well as to its own growing tissues. As such, the normal twin's heart has to work extra hard and is under a lot of stress. This can result in heart failure for the normal twin. Left untreated, up to 50% of these otherwise normal twins ...

[Dopamine | definition of dopamine by Medical dictionary](#)

x We read with interest the manuscript by Godino et al. (1) on Mitraclip in patients who are (potential) candidates for heart transplantation. The topic is very intriguing considering that: 1) studies evaluating Mitraclip as primary treatment of heart failure have produced conflicting results (2-3), and 2) this strategy has not been previously investigated as bridge to heart transplantation (BTT).
